„ ... go-e products are available from many good retailers.“

Connection friendly

Open API

OCPP 1.6

Relaxed operation ... with and without app

You can find out the current charging status at a glance via the LEDs of the go-e Charger. All details about the charging status are also available via the go-e Charger app. You can even keep an eye on the amount of electricity charged via the integrated electricity meter. Works great from the couch, too.

Scheduler

You can determine all settings yourself. Charging time, start/stop and day of the week.

Flexible energy tariffs

Be ecologically and economically sensible when charging by means of electricity exchange prices.
